

SUDAN

PROJECTION UPDATE FOR OCTOBER - DECEMBER 2020 PERIOD SHOWS HIGHER LEVELS OF ACUTE FOOD INSECURITY THAN FORECAST IN JUNE 2020

PROJECTION UPDATE OCTOBER - DECEMBER 2020		
7.1M 16% of the population analysed People facing high levels of acute food insecurity (IPC Phase 3 or above) IN NEED OF URGENT ACTION	Phase 5	0 People in Catastrophe
	Phase 4	1,297,000 People in Emergency
	Phase 3	5,800,000 People in Crisis
	Phase 2	17,408,000 People in Stressed
	Phase 1	20,508,000 People in food security

Overview

Flooding, rampant inflation, political instability and tribal clashes have triggered higher levels of acute food insecurity during the period of October - December 2020, compared to what had been forecasted for the same period in the last projection analysis conducted in June 2020.

During the projection update of October - December 2020, an estimated 7.1 million people, representing 16% of the total analysed population, are expected to face high levels of acute food insecurity (IPC Phase 3 or above) through December 2020 and are in need of urgent action to save lives, protect livelihoods and reduce food consumption gaps.

Nearly 1.3 million people will likely remain in Emergency (IPC Phase 4), nearly 6 million people in Crisis (IPC Phase 3) and over 17 million people are estimated to be in Stressed (IPC Phase 2). This marks an increase of 2 percentage points (from 6.4 million to 7.1 million) of people in Crisis (IPC Phase 3) and Emergency (IPC Phase 4), compared to the projection made in June 2020 for the October - December 2020 period.

Several localities in seven states affected by flooding have been classified one phase higher compared to the June 2020 projection. Five localities (Nyala Janoub, Nyala Shimal, Tulus, Kassala and Shendi) shifted from Minimal Acute Food Insecurity (IPC Phase 1) to Stressed (IPC Phase 2). 11 localities (Galabat Ash Shargiah, Reifi Aroma, Kebkabiya, Soudari, Gebrat Al Sheikh, Al Meiram, Abu Hujar, Ad Dali El mazmom, Sinja, Mershing and

ShargAj Jabal) shifted from Stressed (IPC Phase 2) to Crisis (IPC Phase 3). A few localities reported a population shift of between 5-10% to Emergency (IPC Phase 4).

Although October is the actual beginning of the earlier harvest in Sudan, and the period when the food security situation is considered to stabilize or begin to improve compared to the lean season, food insecurity remains widespread across different parts of Sudan. This is mainly due to the prevailing poor macroeconomic conditions in the country. There has been an extreme increase in prices of all food and non-food commodities. Prices have more than doubled compared to the previous year and have increased by more than 500% compared to the five-year average. A rapid deterioration of the local currency in the parallel market has also been recorded. In addition to this, the ongoing agriculture season witnessed high costs of agricultural inputs and labor, resulting in high production costs, and lower production. The situation has been further exacerbated by the flooding situation, that resulted in widespread destruction across most parts of the country from August to September 2020.

According to the Ministry of Agriculture's (FSTS) preliminary findings of the mid-season assessment for the 2020/2021 agriculture season, the performance of the season is promising in terms of production (expected to be average). However, the high cost of production and transportation, together with the continuous macroeconomic changes, will contribute to above average prices. This will continue to reduce purchasing power and limit poor households' access to food. Most of these households will likely continue using different coping strategies, including reducing their number of meals or consuming food of less quality.

IPC ACUTE FOOD INSECURITY ANALYSIS PROJECTION UPDATE OCTOBER – DECEMBER 2020

Issued November 2020

Key Drivers

Inflation

In August 2020, the year-on-year inflation rate increased by 214% compared to August 2019, resulting in high prices of food commodities and agricultural inputs.

Flooding

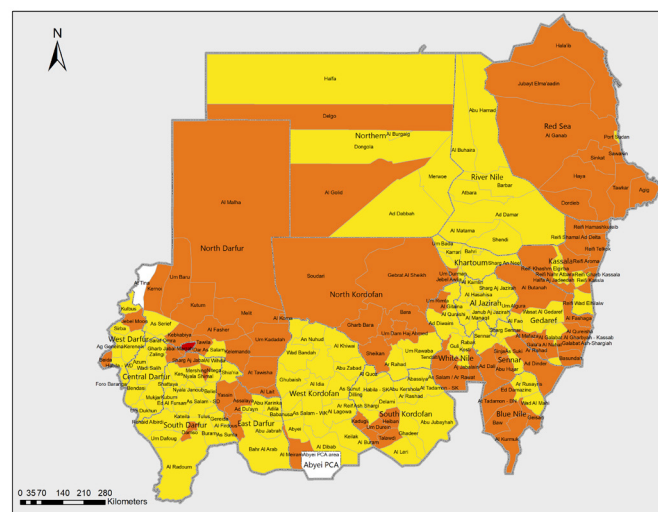

Over 875,000 people were directly affected by flooding, including around 155 deaths; over 175,000 houses either destroyed or damaged; and around 1.4 million hectares of cropped land submerged by waters.

Displacement

Around 2.4 million people have been displaced due to flooding, and political instability/social unrest resulting from tribal clashes in Eastern Sudan.

Projection Update October - December 2020

Key for the Map

IPC Acute Food Insecurity Phase Classification

1 - Minimal	4 - Emergency	Evidence Level ** Medium
2 - Stress	5 - Famine	
3 - Crisis	Areas not analysed	

KEY DRIVERS AND ASSUMPTIONS

Macroeconomic effect on food security: As predicted for the October projection, Sudan continues facing severe macroeconomic difficulties associated with low foreign exchange reserves in the official banking system. Shortages of foreign currency continue and are exacerbated by an increased demand for importing essential food and non-food items (wheat, fuel, medicines, agricultural inputs, spare parts and other industrial requirements, etc.), driven by the flood crisis and the COVID-19 pandemic. As of October 2020, the official exchange rate of the Sudanese Pound remains at 55 SDG/USD, while it recorded up to 250 SDG/USD in the parallel market compared to 240 SDG/USD in September and 170 SDG/USD in August 2020. Based on FEWS NET's integrated projections, the Sudanese Pound (SDG) is likely to depreciate further in the parallel market and will likely be between 225 and 260 SDG/USD through the beginning of 2021. The inflation rate has increased by 214% in August 2020 compared to August 2019, which resulted in high prices of agricultural inputs and high costs of agricultural production.

Flooding: The heavy rains and overflow of the River Nile, along with many seasonal rivers across the country during August and September 2020, has resulted in devastating flooding that has affected nearly all of Sudan's 18 states. According to the Humanitarian Aid Commission (HAC) and the United Nations Office for the Coordination of Humanitarian Affairs (OCHA), as of mid-September 2020, the flooding affected over 875,000 people, including: approximately 155 deaths, more than 175,000 houses either destroyed or damaged, and around 1.4 million hectares of cropped land submerged. Most households have been displaced and are living in schools or temporary shelters. They have also lost their key livelihood assets and food stocks.

Conflict and displacement / security situation: Despite the signing of a comprehensive peace agreement between the Sudanese government and the Sudan Revolutionary Front Rebel Alliance (SRF), political instability and social unrest (resulting from tribal clashes in Eastern Sudan which led to the disturbance of livelihoods in Red Sea, Kassala and Gedarif states) continued during October 2020. The recent conflict in ShargAj Jabal Marrah, South Darfur has escalated recently, resulting in the displacement of an estimated 550-650 individuals to Kidingeer, Keila and Mershing. This current update does not factor in the impact on southeastern Sudan from the ongoing conflict in neighboring Ethiopia's Tigray Region. The situation will have to be adequately monitored through December 2020, and another update should be triggered to monitor the potential large displacement of people and the effects on refugees and Sudanese.

CHANGES COMPARED TO THE PREVIOUS ASSUMPTIONS

Displacement: No further displacements are expected due to the declared ceasefire and peace agreement and ongoing talks between the Government of Sudan and the Sudan People's Liberation Movement-North under the leadership of Abdelaziz El Hilu (SPLM-N El Hilu). Localized displacement, however, is still expected. Seasonal returns of Internally Displaced People (IDPs) and better opportunities of agricultural labor during the harvest period of December could provide better income opportunities to poor groups.

COVID-19: Restrictive measures have been relaxed across the country as of October 2020. Most of the border crossing points have reopened for the movement of commodities, while the movement of people remains restricted. Curfews and internal population movements are back to normal, which is expected to contribute to better access to livelihood sources by a majority of the population. No major direct effects of COVID-19 on food security and livelihoods is expected during the projection period. However, COVID-19 still has indirect effects on food insecurity due to the following factors: competing priorities within households regarding the allocation of limited resources, the lowering volume of remittances, increased costs of key commodities such as fuel, and a context characterized by the scarcity of hard currency. If border closures for population movements continue, it could lead to overgrazing and conflict over water resources between pastoral communities who cross the borders and the resident community in and around the areas where pastoralists are staying.

Disease outbreak: With the limited capacity of the health system in the country and shortage of medical supplies, poor households will not be able to have their medicinal needs met, especially people with chronic diseases or if an epidemic took place during the projection period.

IMPACT ON FOOD SECURITY

Food Availability

- Overall, the availability of and access to food is expected to start increasing gradually with the beginning of the harvest from November through December 2020. The availability of own household production and in-kind payments from agricultural labor is expected to improve compared to the peak lean season of September 2020.
- Fuel shortages and the high cost of transportation will continue reducing market supplies to affected remote areas and roads cut-off by flooding.
- High loss of food stocks in areas affected by floods will continue to contribute to reduced supplies and high demand.
- Expected delays in harvest due to replanting caused by waterlogging in some areas will reduce the availability of households' own production in some affected areas during November and December 2020.

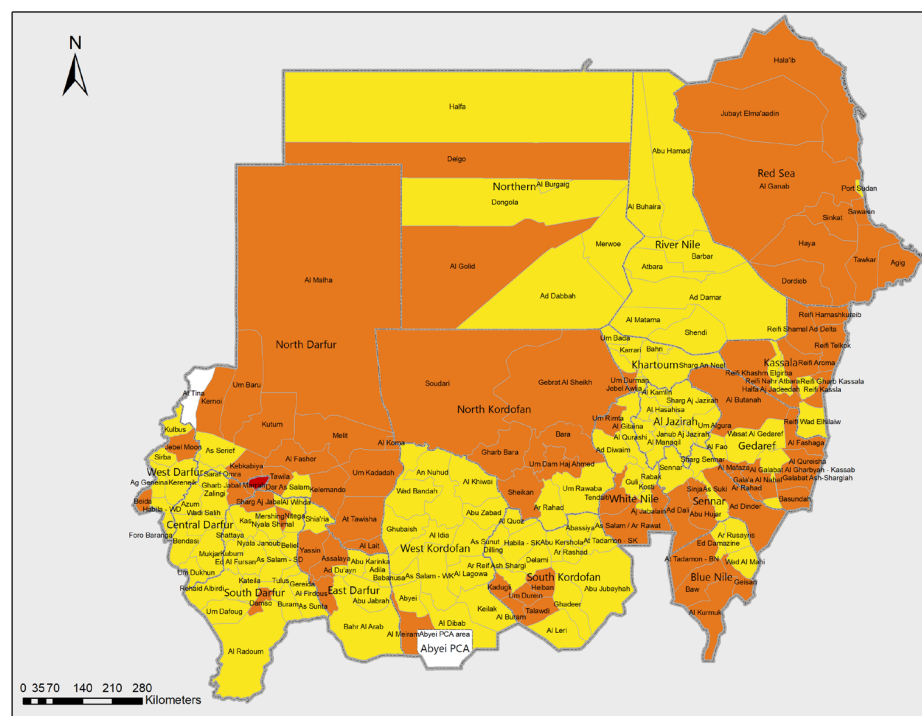

Food Access

- The major change in assumptions is related to the anticipated prices of staple foods for the projection period. As the prices of food are expected to remain at higher levels than anticipated, due to the rapid deterioration of the economic situation in the country (currency devaluation, high inflation rate, lifting of subsidies, shortage of hard currency reserves, etc.). Increased prices of food and non-food commodities and services is a major contributing factor that will affect food security in Sudan during the projection period.
- Food prices are expected to slightly decline with the beginning of the harvest in November and December, but will remain higher than last year and five-year averages. Sorghum and millet prices will remain 207% and 228% higher respectively, compared to the same period last year, and 500% above the five-year average throughout the projection period.
- Prices continue to be influenced by the devaluation of the Sudanese pound, high cost of transportation, and reduced stocks at market and household levels.
- During the projection period, food prices are likely to be affected by the government plan to partially lift subsidies on wheat and fuel. This will affect prices of all other food and non-food commodities, as well as lead to increased stress on the population.
- The government decision of lifting fuel subsidies, which already led to an increase in transportation costs, is expected to increase the cost of harvesting/threshing. Prices are not expected to drop significantly during the harvest period due to the expected increase in harvesting/post harvesting costs.
- Other important factors that will affect people's food security and livelihoods is the limited health services in Sudan and their high cost. There is a noticeable shortage of medicines, due to the shortage of hard currency, to import drugs, which is also exacerbated by the huge difference between the official and parallel market exchange rate.
- In the absence of interventions to reduce the rise in food commodity prices, it is expected that the food situation will deteriorate, especially for vulnerable groups. However, localities classified in IPC Phases 2 and 3 (Stressed and Crisis) are expected to face difficulties in purchasing food and non-food items due to the high prices.
- The expected high prices of cereal and non-cereal food items are expected to continue reducing poor households' access to adequate diversified food through December 2020.
- The high need of construction materials in areas affected by flooding will likely compromise poor households' ability to afford enough food and essential livelihood requirements.

Food Utilization

- The rainfall across the country will likely improve the availability of and access to water, however, expected disease outbreaks and the contamination of potable water sources may occur. Following the rainy season, the flood prone areas of Kassala, Gedaref, West Kordofan, Sennar, White Nile Eastern and Western parts of the country are expected to be negatively impacted by reduced access to clean water. Shortages of water for human consumption, especially in the desert, arid and semi-arid areas of the pastoral and nomadic communities, will expose these populations to diseases and health hazards.

PROJECTION UPDATE MAP AND POPULATION TABLE (October-December 2020)

River Nile	1,564,643	924,195	59	512,195	33	128,254	8	61,321	4	0	0	128,254	8
Sennar	2,016,780	1,000,998	50	693,914	34	279,020	14	42,848	2	0	0	321,868	16
South Darfur	3,702,165	1,871,528	51	1,466,980	40	363,656	10	0	0	0	0	363,656	10
South Kordofan	1,902,123	657,724	35	854,373	45	290,614	15	99,413	5	0	0	390,027	20
West Darfur	1,838,371	1,242,025	68	383,600	21	212,747	12	0	0	0	0	212,747	12
West Kordofan	1,748,349	1,030,183	59	566,103	32	141,841	8	10,222	1	0	0	152,063	9
White Nile	2,612,410	976,814	37	1,156,246	44	339,933	13	139,417	5	0	0	479,350	18
Grand Total	45,012,576	20,507,618	46	17,407,801	39	5,800,373	13	1,296,814	3	0	0	7,097,187	16

Note: A population in Phase 3+ does not necessarily reflect the full population in need of urgent action. This is because some households may be in Phase 2 or even 1 but only because of receipt of assistance, and thus, they may be in need of continued action.

COMPARISON WITH THE PREVIOUS IPC PROJECTION ANALYSIS OF OCTOBER TO DECEMBER 2020

Compared to the last projection for October - December 2020 conducted in June 2020, this projection update conducted in October 2020 is partially in line with the assumptions made for the most likely scenarios through December 2020. The exception is for the unforeseen impacts of flooding and the sustained (above expected levels) macroeconomic crisis.

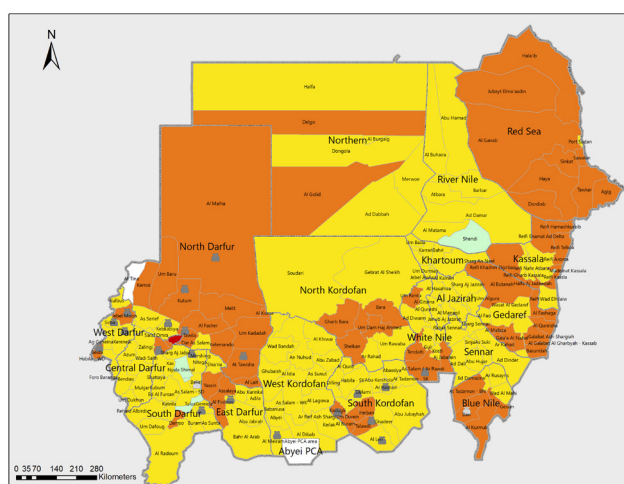

Compared to the June 2020 projection, about 10% of the population has shifted from Minimal Acute Food Insecurity (IPC Phase 1) to Stressed (IPC Phase 2), while the estimated populations in Crisis (IPC Phase 3) and worse increased from **6.4 million people (14%) to 7.1 million people (16%)**. This represents a **2 percentage point increase compared to the previous analysis**. Populations in Emergency (IPC Phase 4) also increased by 33%. The highest increases of populations in IPC Phase 3 or above are observed in ten localities: (Kebkabiya, Gebrat al sheikh, Soudari, Abu hujar, Ad dali, Ad dinder, Sinja, Mershing, Sharg aj jabal and Al meiram).

Compared to the previous analysis, five localities shifted from IPC Phase 1 to IPC Phase 2, and 11 localities shifted from IPC Phase 2 to IPC Phase 3.

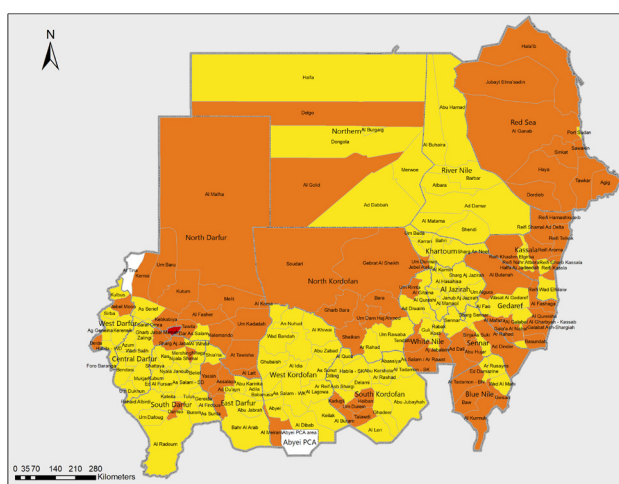

States	Phase 1 to Phase 2	Phase 2 to Phase 3
Gedaref		Galabat Ash Shargiah
Kassala	Kassala	Reifi Aroma
North Darfur		Kebkabiya
North Kordofan		Soudari
West Kordofan		Gebrat Al Sheikh
Sinnar		Al Meiram
		Abu Hujar
		Ad Dali El mazmom
		Sinja
South Darfur	Nyala Janoub	Mershing
	Nyala Shimal	ShargAj Jabal
	Tulus	
River Nile	Shendi	

Projected Situation October - December 2020 (June 2020 Analysis)

Projection Update October - December 2020 (October 2020 Analysis)

Key for the Map

IPC Acute Food Insecurity Phase Classification

(mapped Phase represents highest severity affecting at least 20% of the population)

- 1 - Minimal
- 2 - Stress
- 3 - Crisis

- 4 - Emergency
- 5 - Famine
- Areas not analysed

Area receives significant humanitarian food assistance
(accounted for in Phase classification)

- > 25% of households meet 25-50% of caloric needs through assistance
- > 25% of households meet > 50% of caloric needs through assistance

RECOMMENDATIONS FOR ACTION

Response Priorities

- Urgent actions are required to save the lives and livelihoods of populations estimated in Emergency (IPC Phase 4), as well as protect the livelihoods and reduce food consumption gaps for populations estimated in Crisis (IPC Phase 3).
- Support during the harvest of the ongoing agricultural season will improve food availability during the projection period.
- Scale up diversified livelihood programs for improved self-reliance, resilience building and social protection for all vulnerable communities classified in IPC Phases 2, 3 and 4, with special support for reconstructing and restoring livelihood assets in areas affected by flooding.
- Close monitoring and facilitation of nomads' seasonal movements with their animals to the summer season grazing areas to avoid the destruction of farms and conflict with farmers.
- Scale up and improve access to basic services (health and WASH) throughout the projection period, with a special focus on flood-affected areas.
- Strengthen and support initiatives addressing cross-cutting issues of food security and nutrition of vulnerable groups.
- Promote good nutritional practices at household levels through nutrition-sensitive activities, such as home gardening and educational awareness on food and water safety.

Situation Monitoring and Update

- The next IPC analysis update would occur depending on changes in the projection assumptions and availability of updated contributing data from various sources.
- FSTS and partners will conduct the Annual Crop and Food Supply Assessment Mission (ACFSAM) in November and December 2020 to estimate actual production and develop the country's food balance sheet for the consumption year November 2020/October 2021.
- The macroeconomic crisis has significant impacts on the food security situation of the urban and rural areas, in addition to the impacts of flooding and the associated health hazards.
- The COVID-19 situation will continue to be monitored during the winter season to avoid any health crises and possible impacts on food security and livelihoods.
- The IPC Technical Working Group (TWG) and partners are expected to monitor the food security situation both in rural and urban areas. This includes any further COVID-19 containment measures and possible impacts in the major urban centers of the country, as well as rural areas.
- Strengthen and expand food price monitoring in the major markets of the country.
- Strengthen the capacities of national and state level TWGs on food security information systems and communicate timely information.

Risk Factors to Monitor

- **Desert Locusts:** mature adults and groups of desert locusts were observed on the Red Sea coast north of Toker Delta in September. More immature and mature adults and swarms were observed in Northern Haiya to South of Dordaib in Red Sea state, where egg-laying and hatching has occurred, and band formation has commenced. Scattered immature and mature adults were present in North Darfur, North Kordofan and near the River Nile.
- **Prices:** as inflation is expected to remain high throughout the projection period, prices of staple food and non-food items are likely to remain high and could be exacerbated by macroeconomic challenges.
- Increased outbreaks of waterborne diseases in areas affected by flooding and waterlogging.
- Any further spread of COVID-19 during the winter season and the possibility of reinforcing control measures.

PROCESS AND METHODOLOGY

The Federal Technical Working Group (TWG) in collaboration with the IPC TWG carried out the analysis that covered the period from October - December 2020, based on the available data. The analysis reflects the existing factors that lead to food insecurity and also consider the contributing factors. Data was provided by the following sources:

- Price monitoring (FST & FEWS NET)
- Rainfall (SMA)
- Flood damages and losses report (HAC)
- Mid-season report (FSTS)
- Market Monitor (WFP)
- Inflation (CBS)
- Exchange rate (Central Bank of Sudan)
- Impact of desert locusts (FAO)
- COVID-19 impact on food security in 6 states (FSTS)

What is the IPC and IPC Acute Food Insecurity?

The IPC is a set of tools and procedures to classify the severity and characteristics of acute food and nutrition crises as well as chronic food insecurity based on international standards. The IPC consists of four mutually reinforcing functions, each with a set of specific protocols (tools and procedures). The core IPC parameters include consensus building, convergence of evidence, accountability, transparency and comparability. The IPC analysis aims at informing emergency response as well as medium and long-term food security policy and programming.

For the IPC, Acute Food Insecurity is defined as any manifestation of food insecurity found in a specified area at a specific point in time of a severity that threatens lives or livelihoods, or both, regardless of the causes, context or duration. It is highly susceptible to change and can occur and manifest in a population within a short amount of time, as a result of sudden changes or shocks that negatively impact on the determinants of food insecurity.

Acute Food Insecurity Phase name and description

Phase 1 None/Minimal	Phase 2 Stressed	Phase 3 Crisis	Phase 4 Emergency	Phase 5 Catastrophe/ Famine
Households are able to meet essential food and non-food needs without engaging in atypical and unsustainable strategies to access food and income.	Households have minimally adequate food consumption but are unable to afford some essential non-food expenditures without engaging in stress-coping strategies.	Households either: • have food consumption gaps that are reflected by high or above-usual acute malnutrition; or • are marginally able to meet minimum food needs but only by depleting essential livelihood assets or through crisis-coping strategies.	Households either: • have large food consumption gaps that are reflected in very high acute malnutrition and excess mortality; or • are able to mitigate large food consumption gaps but only by employing emergency livelihood strategies and asset liquidation	Households have an extreme lack of food and/or other basic needs even after full employment of coping strategies. Starvation, death, destitution and extremely critical acute malnutrition levels are evident. For famine classification, area needs to have extreme critical levels of acute malnutrition and mortality.)
